

# *Platinum Casement w/ Built-In Privacy Mini Blinds*

## Tri-State

### Super High Performance Casement Window with Built-in Privacy Mini Blinds

You'll be amazed at the elegance, beauty, and practicality of the Tri-State Platinum Privacy Casement Window with Built-in Mini Blinds. They are engineered with a unique magnetically coupled gear mechanism that is positioned between the clear insulated glass unit that lets you easily control the light level and privacy to suit your preference. The Tri-State Mini Blinds allows you to invite the outdoors into your home with ease and fingertip control, while preserving the charm and clean appearance of your home's interior. Tri-State Mini Blinds have been designed with a patented precision technology to allow you to enjoy full view, complete privacy, or anything you want in-between. Slats are made of an aluminum alloy coated with a low emissivity paint with an Ultra Violet high resistant finish. Tri-State Mini Blinds are enclosed inside an insulated tempered glass unit to eliminate dust accumulation and cleaning.

The All-Welded construction of our Patinum casement window creates a one piece sash and frame that is permanently sealed against the elements. The Optimum dual glazed and doublesealed, composite warm edge super spacer between the argon filled panes of glass eliminates any chance of moisture between the glass. Our superspacer is made from a space age silicon composite, originally used on the space shuttle. Beauty, practicality and efficiency make this window the right choice.

Tri-State Windows have been tested and proven in thousands of homes to save 35% on energy cost.

Top Sliding Mechanism Activates The Mini Blinds To Fully Tilt 180 Degrees. There Are Two Heavy-Duty Magnets Inside The Tilt Lever, Which Eliminate Any Skipping Action That Can Occur With Other Internal Mini Blind Systems.

The side sliding mechanism, which has three heavy-duty magnets inside the lever, activates the entire mini blind to fully raise and lower. This operation is effortless and easy due to its high out-put internal gear-ratio design.
